

Inspera Originality

Putting Academic Integrity Into the Hands of Academics, Where it Belongs.

Safeguard integrity and your institution's reputation with Inspera Originality.

Deeper Insights. Informed Decisions.

Inspera Originality combines advanced similarity detection algorithms and translation capabilities to give you deeper insight into student submissions so that you can make the right decision as to whether it's their own work or contains plagiarized material.

30+Languages

Similarity checking from a choice of over 30 languages in original-language similarity and up to three additional languages (giving you more than 650,000 combinations) in translation similarity.

Reporting Analytics

Cohort analysis to help educators identify patterns and anomalies to assess originality. If enabled, it also allows students to compare their submissions' performance with those of others in the same assessment.

Data Ownership

Your data belongs to you. It's not shared by default; the decision is yours to make. You can share within your institution, or with selected other institutions. Or keep it private.

Easy Integration

Available with Inspera Assessment and with your LMS using LTI 1.3 or API, and also with Canvas using Speedgrader integration.

What Can You Do With Inspera Originality?

Inspira Originality reviews a student submission to check for similarity against a range of sources online and within your database to give you insights on exact matches, contextual similarity and properly cited sources. All of these are displayed in a single report with direct links to the sources matched.

Human Decisions

Get deeper insights with our easy-to-use, color-coded report with advanced similarity checking, context similarity, and multiple translation plagiarism, as well as advanced text manipulation and metadata insights.

Pre-Checks

Where it fits your teaching practice, permit students to view the originality report before they submit.
